IN THE CLAIMS:

1.(Original) A silicone-based pressure-sensitive adhesive comprising:

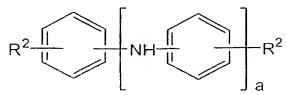

(A) a product of partial condensation of constituents (a) and (b) or a mixture of constituents (a) and (b), where constituent (a) is a crude rubber-like organopolysiloxane having an average of at least one alkenyl group per molecule, and constituent (b) is an organopolysiloxane resin consisting essentially of $R^{1}_{3}SiO_{1/2}$ units where R^{1} is a substituted or unsubstituted univalent hydrocarbon group, and $SiO_{4/2}$ units, and where the mole ratio of $R^{1}_{3}SiO_{1/2}$ units to $SiO_{4/2}$ is in the range of 0.5 to 1.5;

(B) an organopolysiloxane having an average of at least two silicon-bonded hydrogen atoms per molecule, where the silicon-bonded hydrogen atoms are present in an amount of 0.5 to 150.0 moles per one mole of alkenyl groups in component (A);

(C) an aromatic amine compound and/or an organopolysiloxane containing aromatic amino groups, in an amount of 0.001 to 10 parts by weight for each 100 parts by weight of component (A); and

(D) a platinum catalyst in an amount sufficient to cure the adhesion.

2.(Currently Amended) A silicone-based pressure-sensitive adhesive according to Claim 1 in which the aromatic amine compound of component (C) has a general formula:

where each R^2 group is H, OH, or a univalent hydrocarbon group; and $[\underline{a}]$ \underline{a} is an integer equal to at least one.

3.(Currently Amended) A silicone-based pressure-sensitive adhesive according to Claim 1 in which the organopolysiloxane of component (C) has a general formula:

$$R^{3}-X \xrightarrow{SiO} \begin{array}{c} R^{4} \\ SiO \\ R^{4} \end{array} \begin{array}{c} R^{4} \\ SiO \\ X \\ R^{5} \end{array} \begin{array}{c} R^{4} \\ R^{4} \end{array}$$

where R^3 is a substituted or unsubstituted univalent hydrocarbon group or an aromatic amino group; R^4 is a substituted or unsubstituted univalent hydrocarbon group; R^5 is an aromatic amino group; X is a single bond, an oxygen atom, an alkylene group, or an alkyleneoxy group; $[\underline{[m]}]$ \underline{m} is a positive number, $[\underline{[n]}]$ \underline{n} is zero or a positive number; provided that when $[\underline{[n]}]$ \underline{n} is zero, at least one of the R^3 groups is an aromatic amino group.

4.(Currently Amended) A silicone-based pressure-sensitive adhesive according to Claim 1 in which further comprising at least one curing reaction ajuster adjuster.

5.(Currently Amended) A silicone-based pressure-sensitive adhesive according to Claim 1 in which further comprising at least one solvent for components (A) thorugh through (D).

6.(Original) An adhesive tape comprising a support film and a pressure-sensitive adhesive layer in which the adhesive layer is formed by curing a silicone-based pressure-sensitive adhesive according to Claim 1.
